# SCHOOL SCIENTIFIC LABORATORY

## NOTICE

**MAD Company doesn't consider itself obliged to provide items which closely comply with those described in this catalogue because of the continuous progress in manufacturing processes and due to other planning reasons that can require a change or an improvement of the product, but without changing its basic characteristics.**

## PRESENTATION

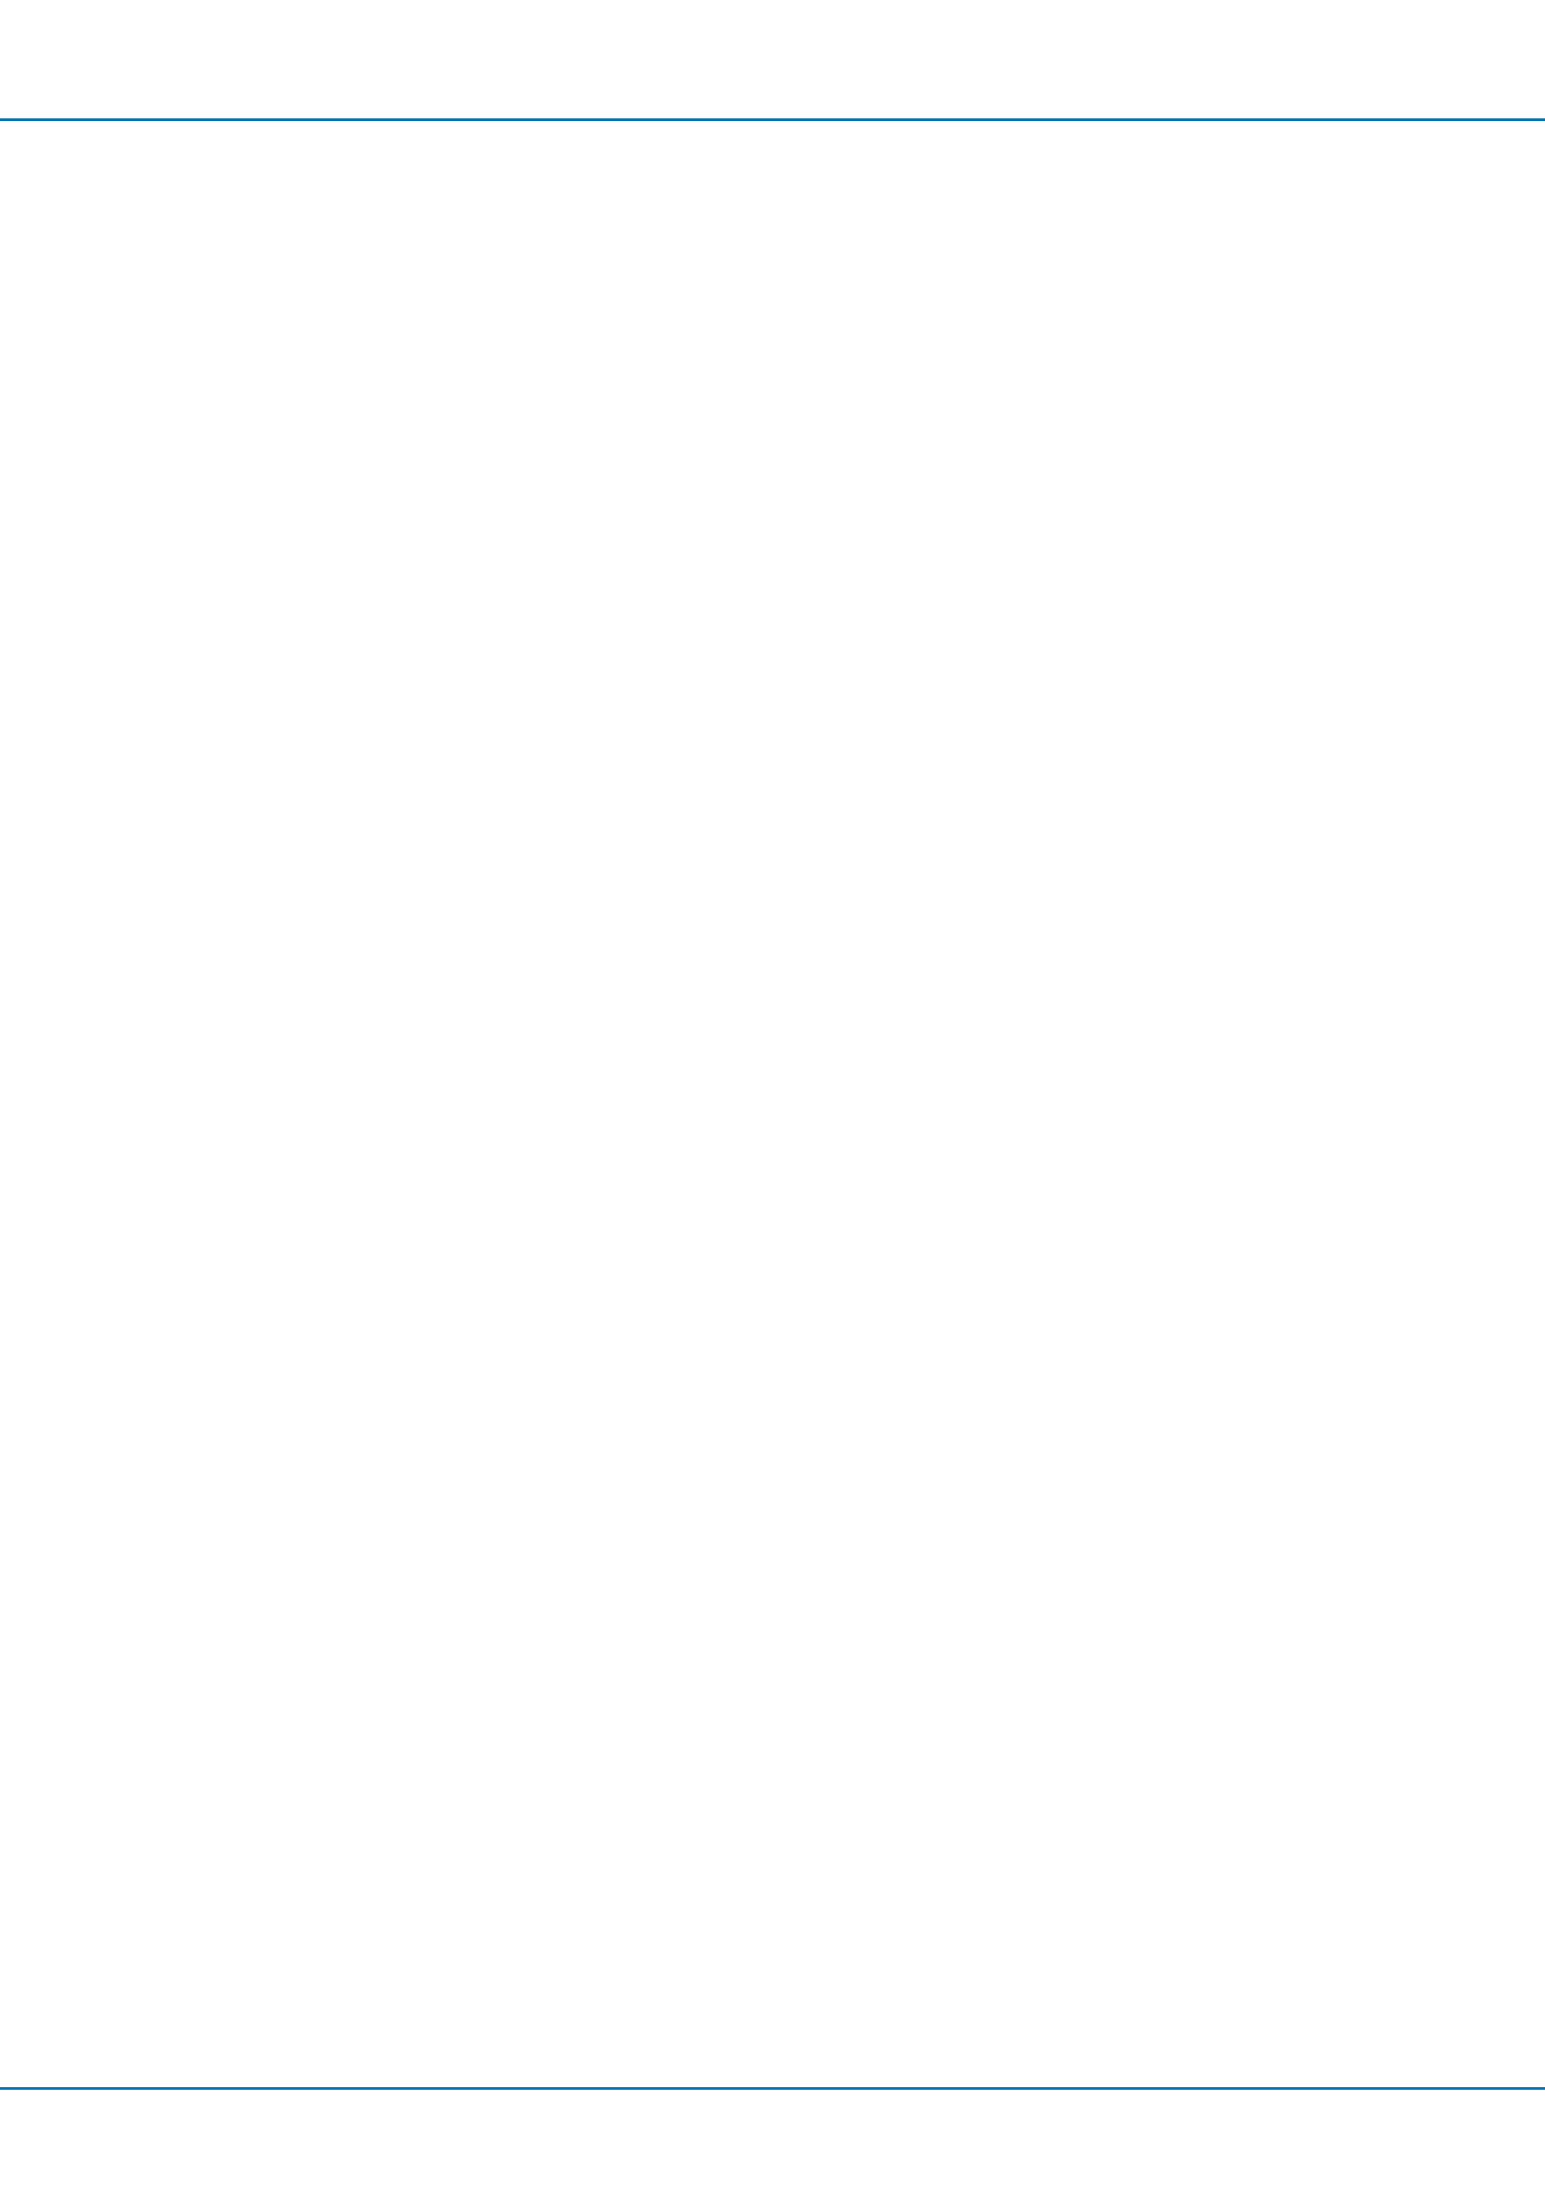

Our company has been working in the teaching field for more than 30 years and has its own workshop. The company succeeds in producing any requested didactic structure: made of glass, of metal or of synthetic material which can be worked with machine tools. In addition, we can repair any didactic apparatus, even if it is not produced by our company.

This catalogue is addressed to compulsory education and to high school, it offers a series of kits, sets and different items designed to help the students learning the experimental method. The risk of explaining scientific knowledges only by using theoretical constructs, is to give a simplistic and distorted vision of experimental reality.

The notions can't be the main aim of scientific teaching for the students.

The aim of teaching scientific disciplines has to lead students to approach to the scientific-experimental method.

In order to facilitate the teachers in choosing the suitable items, the catalogue has been divided into different sections.
